Endless Possibilities

Sparkling Up Your Beverage Menu

Whether you're a seasoned mixologist or just someone who wants to enhance a good drink, there's one simple trick that can take your beverage menu to the next level.

Sparkling water is not overpowering and adds Effervescence and Lightness to your beverage flavours making them crisp and delightfully refreshing.

By using sparkling water, you can add that same bubbly magic to just about any beverage.

Versatility of *Sparkling Water*

No venue is too small or too large to complement its offering with sparkling water. Whether you run a cozy café, a bustling restaurant, or a large event space, sparkling water adds value without being logistically burdensome.

Small venues can enhance their intimate atmosphere with premium bottled water by using in-house carbonation, while larger establishments can offer sparkling water in bulk for events and banquets.

Its versatility and ease of implementation make it accessible for any size venue, elevating the guest experience regardless of the scale.

Quality & Sustainability

Environmental Sustainability and Quality Equipment

Environmental Sustainability as a Selling Point

Enhance the dining experience for eco-conscious patrons. In today's hospitality industry, sustainability is not just a trend—it's a necessity. Offering in-house made sparkling water using high-quality filtration systems helps reduce the environmental impact associated with bottled sparkling water.

By eliminating the need for single-use plastic bottles or glass bottles that require transport and disposal, establishments can significantly cut down on their carbon footprint. This eco-conscious approach resonates with environmentally aware customers who appreciate green initiatives.

Quality Equipment

To ensure consistent taste and quality, it is important to invest in a proven, quality sparkling water system. These systems not only filter water for purity but also allow control over carbonation levels, which is key for creating a superior product. High-quality machines are durable, easy to maintain, and ensure that sparkling water is always fresh and on demand, handling both small-scale daily operations and busy peak hours, ensuring guaranteed customer satisfaction.

Range of Products

The diversity of hospitality venues is easily accommodated with the range of water dispenser designed for that unique self-serve application.

High Capacity and High Demand

Freestanding water dispensers are perfect for venues that require high volume delivery, such as large restaurants, hotels, or event spaces. These dispensers often come with dual capabilities for Still and Sparkling water, and they can deliver larger amounts of water, reducing the need to plan for peak busy periods.

Elegant and Professional Designs: allows them to seamlessly fit into upscale dining rooms, lobbies, or guest areas. Their design makes them an excellent choice for visible areas where design needs to match the decor.

Countertop Water Dispensers save Space and are Versatile

For smaller venues like cafés, bars, and bistros where space is at a premium, or a larger venue with limited available space, the countertop dispensers offer a compact solution. Despite their smaller size, these dispensers can still offer high-quality sparkling water with customizable carbonation levels.

Classic Look or Modern Designs: these dispensers feature simple, intuitive controls for ease of operation in self-serve applications. The features and finishes of these models blend easily into a venue's interior designs.

Tailored Solutions

Tailoring Water Dispenser Solutions for Different Hospitality Venues

Different hospitality venues have unique needs when it comes to selecting an in-house water dispensing system.

Choosing the right equipment for sparkling water, based on the venue's size, customer volume, and style of service, is crucial for ensuring seamless operations and customer satisfaction. To understand the wide array of water dispensers available helps in selecting the right design to elevate both aesthetics and functionality in various hospitality settings.

Accessories

Upselling and Marketing

Offering sparkling water in branded bottles can be used as a marketing tool. The value of having a branded bottle with premium tasting sparkling water is easy to on sell to enhance the patrons dining experience at a perceived added value.

Stream's 750ml Still & Sparkling Glass Bottles are elegantly designed and manufactured in Europe, offering a stylish and sustainable way to serve table water. These high-quality glass bottles further enhance the presentation of the venue service while supporting eco-friendly practices by reducing the need for single-use plastic. Perfect for elevating your guest experience.

Medallions and Timber Handles

Make a custom medallion for your Stream tap, allowing you to personalise it with your venue's colours and an option to add your logo. It's a unique way to align your water service with your brand, adding a stylish and cohesive touch to your space. Elevate your presentation while showcasing your brand with a custom-designed tap medallion.

Timber dispensing handles offer an alternative to the more common plastic handles, bringing a unique and authentic touch to sparkling water service.

High-quality timber handles are not only visually appealing but also durable and comfortable to use.

Return on Investment

Return on Investment and Boosting Profitability

Revenue Opportunities from Investment

The initial purchase cost of a Sparkling Water machine can be recovered, by different means to ensure return on investment.

A Sustainability Surcharge can be applied: where guests are charged a small fee for sparkling water service. This fee is justified by the reduction in plastic waste, carbon emissions and other environmentally responsible practices. This small fee, collected over time, will pay for the sparkling machine.

Another option for a faster return is to upsell the Sparkling water in the 750ml customised branded bottle.

With the cost to produce a 750ml bottle of sparkling water being less than 20 cents, the investment is returned quickly.

Reducing Expenses and Costs

The long-term savings from not purchasing pre-packaged drinks and also reducing storage needs is one of the most significant cost savings that comes from eliminating the need to purchase, stock and store bottled sparkling water.

Custom Sparkling Water to Increase Revenue

By using syrups and custom flavours to customise sparkling water in-house, venues can purchase these ingredients allowing for better control over supply costs compared to buying pre-flavoured bottled drinks.

This in-house customised sparkling water can be sold at a premium and increase the diversity of your beverage menu offering.

Example

If you sold as little as 12 bottles a day at \$5 per bottle the machine would be paid for in less than 4 months.

Wineries, Clubs & Bars

The idea of a Club means status and prestige and requires high-speed dispensing systems that can keep up with fast-paced environments.

Sparkling water is not just a drink option here but a critical component for cocktails and mocktails enhancing the club experience.

Wineries and Wine Bars

The customised unique experience of a wine venue is complemented with the offering of sparkling water to cleanse the palate between the different varieties of wines being tasted, making sparkling water an essential part of the wine tasting experience

Bars

Bars experience heavy usage so systems that integrate with back-bar setups ensure quick, on-demand sparkling water that bartenders can access seamlessly while preparing drinks. With the need to provide hydration the still water from these systems is also vital to patrons needs.

Hotels, Resorts and Event Venues

Event Venues

Event and catering spaces often require high capacity for large gatherings. Events like conferences or weddings need dispensers with large volume to provide continuous service.

Having multiple dispensing stations at various points can also help reduce wait times and improve guest satisfaction.

Hotels

Hotels often offer self-service sparkling water dispensers in communal areas like lounges, gyms, or breakfast buffets. Systems designed for guest-accessible areas should prioritize ease of use and durability.

Resorts

Upscale resorts are also able to offer, high-end sparkling water dispensers, providing a luxury touch. Compact but powerful units with elegant designs can elevate the guest experience, offering fresh, sparkling water within the various areas of the resort to enhance the experience.

Cafés, Bistros and Restaurants

Bistros

Bistros benefit from dispensers that offer both sparkling and still water. These systems are perfect for venues with limited counter space but high customer turnover. Smaller, more versatile systems are ideal for establishments that serve lower volumes but still want to offer premium sparkling water.

Cafés

In a café setting, sparkling water can be used as a base for unique beverages like sparkling iced teas, coffee tonics, or signature syrups. This adds variety to the menu without taking up much space, and a compact dispenser allows staff to prepare these drinks quickly and efficiently.

Restaurants

Full-service restaurants often experience high demand during peak hours. A robust water dispenser system that provides both still and sparkling water quickly and efficiently is essential. Sparkling water systems with high-capacity and fast carbonation rates are essential to keep up with this demand.

Syrups & Additives

Customising the Sparkling Water experience

Elevate your customers experience by enhancing your beverage menu with the essential ingredient of Sparkling Water.

To offer Chilled Still and Sparkling Water is done with minimal additional cost and can be sold at a premium price significantly boosting revenue and your bottom line.

This further enhances your beverage menu, with the growing trend of customized beverages and with diners seeking unique, refreshing options, sparkling water will increase your returns.

The idea of using sparkling water with syrups, caffeine boosts, with diced or sliced fruit and even mineralised filter cartridges creates options, enhancing the dining experience.

From offering standard bottled sparkling water there is many more options. These enhanced beverage offerings can add value to the menu, allowing for a higher price point.

Even create your own Signature Sparkling Water experience, crafting the Perfect Beverage Menu.

Transformation of Your Venue

From fine dining restaurants to cafés, event spaces and clubs through to hotels or resorts, there's a water dispenser solution for every type of venue.

Choosing the right system not only enhances operational efficiency but also allows venues to offer a high-quality, customizable sparkling water experience for guests.

By selecting a system that fits your venue's specific needs, you can ensure optimal performance, better customer satisfaction, and ultimately, increased profitability.

History of Sparkling Water

Joseph Priestley, an English Chemist turned Ordinary Water into something Extraordinary.

In 1767 he discovered a method to infuse water with carbon dioxide, resulting in the first artificially carbonated water.

This discovery has revolutionised drinks we enjoy today.
